

Microsoft Inter menaged by Onx

Holistic, unified endpoint management to tackle modern business challenges

Each new device that accesses your business data is a potential vulnerability. Traditional endpoint management systems exist to combat threats through monitoring and policy enforcement—but as devices proliferate in modern workplaces, legacy solutions run up against the limits of their capabilities. Bridging the gaps with spot solutions is costly and inefficient.

Microsoft Intune addresses the challenges of endpoint management in an evolving, hybrid workplace, giving you the tools to protect critical data and services while reducing complexity for in-house technology teams.

Endpoint management weaknesses hold enterprises back

Unmanaged BYOD

Limited remote assistance

Legacy cybersecurity standards

Unsecured data

Frustrated, less productive employees

Outdated, unsafe applications

Intune unifies and enhances endpoint management

Consolidate support and security operations

Maximize network visibility and control

	ſĸ

Adapt to employee needs while shielding critical data and services

Collaborate and integrate with confidence

Seamless integration with existing Microsoft services yields extra benefits

- Fine-grained policy and application management
- Detailed endpoint analytics
- Streamlined certificate management
- Cloud-based administration and features
- Enhanced device provisioning and software deployment
- Tight-knit cybersecurity
- Reduced cost

Shine a light on blind spots: Only 10% of organizations monitor every connected endpoint.¹

Harden attack surfaces: 44% of organizations that added endpoint management discovered systems with open access.¹

Less is more: Half of organizations with more than 15 management solutions report that at least 20% of their devices are still unmanaged.¹

Consolidation also drives costs down:

- Reduced IT staff and hours spent on management
- Improved employee experience and reduced turnover
- Higher employee productivity
- Lower risk of data breaches and associated costs
- Bundled licensing

To get the most out of Intune, leverage OnX.

In a world of increasingly complex enterprise technology, endpoint management systems must be up to the task. Gaps leave your business vulnerable to security threats, reduce productivity, and waste resources.

OnX can help you optimize not only your Intune implementation but also your entire Microsoft ecosystem. Expertise providing customized technology solutions to industry-leading enterprises makes OnX an ideal partner to support your unified endpoint management strategies. **Contact OnX today** to begin developing a roadmap toward comprehensive, efficient IT management operations with Intune.
